

Water Dance

Last Updated Thursday, 17 December 2009

by Fountain Systems™

Its nickname is "The Plug and Play Bellagio in a Box" and we feel it is well deserved. This musical fountain is what the industry has been waiting for many years: an affordable, easy to install water feature choreographed to music. All the components required come in one box that fits in most cars and the installation does not require any specific knowledge or tools. Contractors can easily install the fountain simply by reading the installation manual.

Fountain Base Unit

The Water Dance consists of 3 pumps, 8 lights (6 for the on deck version), the water vessel, the controller, an SD card containing the choreographed music and a remote control. Three versions are available: floating, in landscape and on deck. No matter what version you choose, each version comes complete in a box with all the required components.

The remote control allows you to control the fountain functions, such as changing song. You can also operate the fountain in manual mode where you can control the height of each nozzle and the color of the lights, all of this using the remote.
