

LIQUID SOLAR Pool Covers

By Flexible Solutions Ltd.

Liquid solar pool covers have made a name for themselves over the past 20 years, and are considered a very viable pool blanket option.

Almost all liquid pool covers are manufactured using a biodegradable active ingredient that breaks down within a couple of days. With this in mind, in order to achieve the best effectiveness possible, a continuous application is recommended. While some products vary their dosage rates and frequency of dosing, Flexible Solutions has researched the process carefully and found that a continuous dosing system, such as Ecosavr or the HS115 automatic metering system, will ensure the best results possible.

If you want to offer your customers a product line that has been tested and proven for safety and efficiency, make the decision to work with a manufacturer who offers third party test results and testimonials and will support their claims with integrity.

Choose Ecosavr and Heatsavr by Flexible Solutions.
