

MICROBE-LIFT

LEGACY KOI & GOLDFISH FOOD

A Bacterial Diet for Fish

MICROBE-LIFT®/LEGACY foods are made by the extrusion process - not pelleting. During extrusion the cell walls of all organic substances contained in the food are disintegrated under pressure. The nutrients hidden in these cells are thus easily accessible for digesting agents, resulting in much higher digestibility in comparison with pelleted or flaked food. Additionally the LEGACY foods have an extremely low phosphorous content. This keeps fish waste to a minimum and helps to ensure superior water quality.

UV Resistant Packaging

Feeding A Whole New Standard...

It's not just a fish food, it's a complete nutritional feeding system!

MICROBE-LIFT

LEGACY

SINKING FOOD

Summer Staple Food™

Sinking (transitional) food may be used when adding new fish to the pond. Generally new fish are shy until they become more familiar with their surroundings and new neighbors. MICROBE-LIFT/Sinking Food Pellets are a great way to make sure your fish receive balanced meals while adjusting to their new surroundings. Additionally, sick fish don't come to the pond's surface and feed off the bottom of the pond.

PRIMARY FOOD

Feed a Primary food every other day, 3 days per week.
