

Directions for use:

Pool First Aid

1. Add 2oz per 1000 gallons (60ml per 3785L)
2. Broadcast Pool First Aid around the surface of the pool
3. Can be used every two days until the pool is crystal clear
4. Apply directly to water line to quickly remove any existing water line build-up

Important: Allow chlorine levels to return to normal before adding Pool First Aid. If water temperature is below 70 degrees, Pool First Aid will work more slowly, so allow more time for results.
