

# Ultra Nator™

## Control and Alarm System

### Duplex Sump Pump Applications

The **NEW Ultra Nator™** control and alarm system is designed to control two 120V 1 HP or 15 Amp single phase pumps. The **Ultra Nator™** system features **two receptacles** for easy pump connections. **No wiring!**

#### Operation:

In **normal operation** pumps will alternate based on the pump switch level. If an **alarm condition** occurs (top float activates), the alarm light and horn turn on. The pump in use will turn off and the other pump will turn on. Pumping will continue until the pump switch deactivates (bottom float). **Note:** The *Ultra Nator™* will only run **one** pump at a time.

#### Features:

- **NEMA 1** rated for indoor use
- **Alternating** pump action equalizes pump wear
- **Factory-installed** 10 ft. power cord
- **Factory-installed** pump activation and alarm activation switches for easy installation (various switch configurations available)
- Green power on indicator
- Green pump run indicators (pump 1, 2)
- Audible and red indicator visual alarm
- Normal/silence alarm switch mounted externally for easy operation
- Receptacles are angled to accept standard or right-angled pump plugs
