

ProLine

The Professional Irrigation Controller

ProLine was not born on an engineer's computer screen; rather crafted by years of contractor input. If it was on their wish list, it was added to ProLine.

PL1600/PL1600I
4 to 24 Zones

While other controllers stop at the standard features needed to run an irrigation system, ProLine ignored the memo. It not only contains features built for the installers and end-users, but it also has features for the ones that maintain the systems. Conventional? We proudly say, "no".

The ProLine family also includes:

For the Price... Wow

Anyone new to the ProLine can't believe all that's packed into this controller, and in most cases, the cost is less than the other guys.

No Battery Required

Your program is stored on the ProLine's on board memory chip. Even a program that can be restored when "somebody" messes it up.

PL800 / 4 to 8 Zones

The Next Level

Sure some only set the time, date, run times, and days to water - but you don't. That's why we added many advanced programming features giving you more power.

Time to Grow

New landscaping needs a grow-in period. ProLine can be set to temporarily do this, then return to it's normally scheduled programming.

PL4800 / 12 to 48 Zones

Runoff Eliminator

Maximum allowable run time and minimum soak time are set by program.

Intelligent Switch

Time for a Masters Degree? Just swap the ProLine panel with the SmartLine panel.

Connects to the SmartLink Network for complete web-based control.

Service tools like: built-in multi-meter, valve locator, program backtrack, and other useful options.

With the press of a button, select between English and Spanish language options.
